

Beyond Performance: The Inclusivity Gap

A Comparative Data Analysis of Post-Pandemic Wellness Trends in Italy and the USA (2021–2026)*

Lead Data Analyst: Ilenia Sanzò

Target Stakeholder: Elysian Wellness Group

June 2026

Google Data Analytics Capstone Project | Executive Board Briefing

***AI Disclosure:** Generative AI was utilized transparently as a co-pilot for conceptual brainstorming, syntax validation (Python/SQL), and visual formatting, ensuring absolute professional integrity.

Executive Summary: The Inclusivity Gap

A structural misalignment between wellness industry capital allocation and shifting consumer demand

1. Saturated Infrastructure (World A)

Traditional wellness structures remain anchored to rigid, metric-driven individual performance, causing market saturation and consumer fatigue. Data trends reveal high barriers to entry, elastic demand, and inflating Customer Acquisition Costs (CAC).

2. Unaddressed Demand (World B)

Longitudinal data identifies an accelerating post-pandemic consumer migration toward accessible, secular, and mentally integrated frameworks. This expanding 'Blue Ocean' opportunity displays resilient growth and deep cross-border lifestyle integration.

3. Technical Validation & Imperative

By executing a multi-platform data pipeline—Spreadsheets, Python (Pandas), and SQL (BigQuery)—this study exposes the exact baseline of 1,464 long-format records spanning 5 years. Bridging this gap allows Elysian Wellness Group to capture a low-friction market segment.

Project Goals: Driving Executive Decisions

Aligning data insights with Elysian Wellness Group's leadership objectives

1

Strategic CapEx Roadmap (CEO)

Provide a definitive, data-driven regional market entry timeline backed by compound growth data to de-risk capital expenditure allocation.

2

Marketing Efficiency (CMO)

Isolate granular monthly consumer seasonality and temporal elasticity patterns to architect optimized advertising spend calendars and lower CAC inflation.

3

Portfolio Diversification (VP Product)

Identify structural consumer pulling forces across the 4 foundational wellness pillars (Body, Mind, Spirit, Inclusion) to maximize product-market fit.

Project Methodology & Data Pipeline

Data pipeline architecture from multi-platform ingestion to visual business intelligence.

1

Ingestion & Extraction (Ask & Prepare)

Integration of programmatic search intent datasets through iterative semantic extractions via Google Trends. Isolation of 1,464 granular search index signals spanning Italy and the USA from 2021 to 2026.

2

Programmatic Cleaning (Process)

Execution of automated Python 3.12 (Pandas) transformation logic to execute wide-to-long dataset reshaping (melting), programmatic null-value handling, and metadata schema alignment.

3

Cloud Querying & Viz (Analyze)

Schema deployment within Google BigQuery SQL data marts. Verification of volumetric integrity and data connection to Tableau Public for interactive visual analytics and strategic insight discovery.

Problem Statement: The Core Wellness Disparities

Three critical gaps isolating traditional market offerings from contemporary consumer realities.

1. Performance Fatigue

 DATA ANCHOR: World A growth deceleration and market saturation (2021-2026)

Traditional, metric-heavy fitness frameworks focus excessively on physical output and competition, driving unprecedented levels of consumer burnout and anxiety.

2. Mental Health Isolation

 DATA ANCHOR: Mind pillar identified as a primary baseline volume driver

Emotional, spiritual, and psychological well-being are frequently treated as isolated, premium add-ons rather than foundational pillars of daily personal care.

3. The Inclusivity Barrier

 DATA ANCHOR: Inclusivity Gap Ratio structural inflection point (Late 2022 - Early 2023)

Market environments remain structured around restrictive, hyper-optimized stereotypes, actively alienating neurodivergent, aging, or non-athletic demographics.

A multidimensional taxonomic framework built for inclusive consumer engagement.

Beyond aesthetic benchmarks:

 DATA ANCHOR: High-volume baseline anchor integrated with cross-border linguistic anchors (Yoga/Pilates)

Moving beyond aesthetic performance toward somatic awareness, functional longevity, and intuitive nutrition.

Beyond cognitive fatigue:

 DATA ANCHOR: Primary absolute volume share driven by exponential post-pandemic interest velocity

Secularized mental hygiene, emotional regulation, and accessible tracking mechanics designed to mitigate stress.

Beyond rigid tracking:

 DATA ANCHOR: Secondary emerging niche showing steady compounding acceleration curves

Decolonized personal reflection, modern mindfulness tools, and the cultivation of a grounded, everyday inner truth.

Beyond restrictive stereotypes:

 DATA ANCHOR: High baseline index in Italy and compounding acceleration in the USA (2021-2026)

Label-free accessibility, generational intersectionality, and a structural focus on neurodivergent demographics.

Quantitative Analysis: Data Ingestion Pipeline

Statistical integrity and multi-platform aggregation framework.

Sample Volumetrics

 DATA ANCHOR: Independent validation benchmarks locked via Google Sheets pivot tables

Initial diagnostic audit and schema profiling conducted in Google Sheets. Extraction of 1,464 long-format data points establishes an unweighted, audited baseline for downstream pipeline execution.

ROCCC Standards

 DATA ANCHOR: High-volume, anonymized consumer behavior search index aggregates

Data validation enforced through strict ROCCC protocol metrics, ensuring high reliability, original origin, comprehensive scope, and temporal currency (2021-2026).

Structural Integrity

 DATA ANCHOR: Python-decoupled raw records structured via explicit SQL Schema DDL in BigQuery

Eradication of systemic bias through automated null-value purging and logical constraint handling, yielding a clean dataset optimized for scalable querying.

Cross-Border Market Maturity: Italy vs USA

Geographic asymmetry in wellness infrastructure and consumer migration velocity.

The Velocity Driver (Italy)

 **DATA ANCHOR:** Accelerated search volume index velocity relative to baseline post-2021

A textbook "Blue Ocean" segment showing explosive post-pandemic momentum. Lower structural barriers and a rapid consumer shift toward holistic wellness yield maximum organic growth velocity.

The Revenue Anchor (USA)

 **DATA ANCHOR:** High-baseline, mature search index trajectories with predictable seasonal boundaries

A highly mature, hyper-saturated market. While generating massive baseline revenue, expansion is restricted by high customer acquisition costs (CAC) and severe fragmentation in performance-centric fitness apps.

The Inclusivity Arbitrage

 **DATA ANCHOR:** Cross-border regional asymmetries validated by historical search aggregates

Deploying a shared ecosystem across both boundaries allows Elysian to leverage stable US cash-flows to fund high-velocity, low-friction market penetration inside the European theater.

Cross-Border Gap Dynamics

Macro-level validation of the post-pandemic inclusive wellness shift (2021-2026).

Our custom-calculated Inclusivity Gap Ratio isolates the exact velocity shift between performance and holistic intent. The data highlights a critical cross-border divergence: while the Italian market acts as the primary velocity driver with an early structural contraction, the US market exhibits a more stable, linear trajectory governed by high baseline capacity. Both geographical tracks reached a major structural Trend Convergence pivot between late 2022 and early 2023, which permanently consolidated into a new operational market baseline by 2024.

Consumer Seasonality & Cognitive Load

Monthly search velocity identifying anti-cyclical demand windows.

Granular monthly tracking proves that wellness engagement operates independently from traditional fitness cycles. Peak search volumes consistently align with periods of elevated cognitive stress across a verified index scale ranging from 29.47 to 59.61. While Italy demonstrates an immediate, powerful engagement window during the autumn return transition (September to October, Q3/Q4), acting as a resilient anti-cyclical demand buffer, traditional performance models (World A) experience severe contractions during the summer break, bottoming out in August across both geographic cohorts before experiencing a robust, stress-driven Q3/Q4 recovery wave.

Monthly Search Velocity Index & Consumer Seasonality													
Country	World	Date											
		1	2	3	4	5	6	7	8	9	10	11	12
ITA	World A	54.20	53.77	57.33	56.63	59.61	52.07	39.70	36.07	41.70	49.40	53.80	44.50
	World B	53.90	55.67	54.60	51.40	51.28	45.77	37.23	37.97	51.83	51.77	50.27	46.13
USA	World A	42.67	46.17	44.67	45.37	36.58	31.17	31.60	29.47	35.00	34.97	34.47	33.20
	World B	39.90	43.03	41.27	43.23	33.42	30.90	33.27	29.93	31.90	31.33	31.77	30.37

Granular Pillar Disaggregation

Isolating individual wellness verticals to deconstruct the cross-border divergence.

Disaggregating the macro trend reveals distinct cross-border mechanics across the 4 pillars. The Italian market undergoes a sharp early structural contraction in the Inclusion baseline, followed by an exponential late-stage surge inside the Mind vertical post-2023.

Conversely, the US market retains its dominant volume anchor in performance-centric metrics (Body), while exhibiting an acute, massive volumetric search velocity spike within the Spirit pillar peaking in 2024, validating a clear portfolio diversification mandate for the client.

Body Pillar

Mind Pillar

Spirit Pillar

Inclusion Pillar

Granular Intent & Semantic Mapping

Deconstructing core pillars into high-velocity consumer search terms.

Granular keyword evaluation reveals a profound cultural divergence across both semantic cohorts. Under the performance-centric taxonomy (World A), both markets exhibit high-volume physical optimization, with the US led by 'Weight loss' (4,083) and Italy heavily driven by 'Dimagrire' (4,197) and 'Definizione corpo' (4,182). Conversely, within the inclusive framework (World B), the Italian market shifts radically toward non-secular, self-directed velocity, anchored by 'Yoga' (4,878) and 'Crescita personale' (4,569). This localized taxonomy layout provides the foundational architecture required to align content and service delivery with specific cross-border market expectations.

World	Pillar	Keyword	Country		Value	
			ITA	USA		
World A	Body	Body transformation		3,279	303	4,878
		Definizione corpo	4,182			
		Definizione muscolare	2,542			
		Dimagrire	4,197			
		Muscle definition		2,857		
		Weight loss		4,083		
	Inclusion	Esclusione sociale	2,694			
		Social exclusion		1,080		
	Mind	Gestione del tempo	2,503			
		Time management		1,487		
	Spirit	Digital detox	2,203	793		
World B	Body	Alimentazione consapevole	303			
		Intuitive eating		2,467		
		Pilates	2,825	3,161		
		Yoga	4,878	3,154		
	Inclusion	Inclusione sociale	2,324			
		Social inclusion		1,361		
	Mind	Emotional regulation		1,808		
		Gestione delle emozioni	3,043			
	Spirit	Crescita personale	4,569			
		Self-growth		859

Strategic Takeaways & Business Impact

Translating data-driven insights into actionable market positioning.

1. Primary High-Alpha Entry Vector (Italy First)

- **Launch operational pad:** Prioritize immediate market entry in Italy to capture the massive pool of unaddressed consumer intent.
- **Capital efficiency:** Direct initial expenditure toward localized customer acquisition and community scaling, avoiding broad international dispersion.
- **Velocity advantage:** Capitalize on the Italian market as the primary driver of the post-pandemic inclusive wellness paradigm shift.

2. Tactical GTM & Deployment Calendars

- **Optimize media spend:** Align advertising spend with empirical seasonal cycles rather than distributing budgets uniformly.
- **Bypass spring congestion:** De-escalate marketing investments during early-year windows dominated by low-conversion legacy brand noise.
- **Heavy-index autumn recovery:** Heavy-index acquisition campaigns during the late-Q3/Q4 return (September–October) when consumer stress and cognitive load peak.

3. Addressing the Inclusivity Gap

- **Label-free architecture:** Enforce open community designs that deconstruct traditional physical entry barriers and binary performance tracking metrics.
- **Mind-body integration:** Seamlessly bundle accessible conditioning with secular mindfulness tools to maximize product-market fit.
- **Asset positioning:** Convert structural commercial mismatch into a resilient corporate asset by serving ignored demographic segments.

Data Governance & Ethical Framework

Securing the analytical pipeline through rigorous compliance and intellectual property protection.

Regulatory Compliance & Privacy

- **Privacy by Design & GDPR Alignment:** The entire data lifecycle—from automated Python-based extraction to the Google BigQuery staging environment—operates exclusively on anonymized, public macroeconomic search index aggregates.
- **Zero PII Ingestion Risk:** No Personally Identifiable Information (PII) is captured, stored, or processed, fully de-risking cross-border operations and ensuring native compliance with EU GDPR and US FTC standards.
- **Pipeline Verification Metrics:** Data cleanliness and pipeline architecture are strictly validated through explicit row-count Volumetric Reconciliation, Boundary/Constraint Audits, and Semantic Invariance checks.

Analytical Integrity & IP Shield

- **Responsible GenAI Governance:** Applied a strict "**Human-on-the-loop**" approach; Generative AI tools were restricted to strategic brainstorming, code syntax validation (Python/SQL), and layout optimization, maintaining absolute professional integrity.
- **IP Shield Enforcement:** Technical indicators, market gaps, and seasonal vectors are leveraged to define high-level market parameters while corporate trade secrets and core operational mechanics remain strictly confidential.
- **Architecture & High-Level Requirements:** All strategic directives serve as high-level architectural requirements for Elysian Wellness Group, guiding capital deployment without exposing proprietary corporate assets.

Thank you

Open for questions and strategic discussion.
